Global Data Mining, LLC

The 21st Century Solution for Global Trade Data

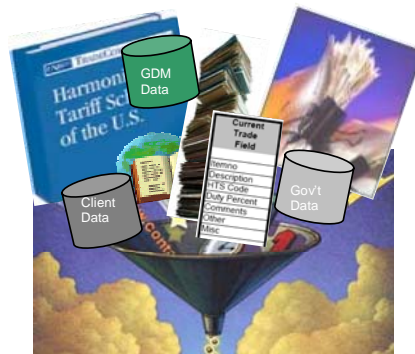

Is global trade data working for you? Or are you working for it?

According to research firms IDC and Delphi Group, the average knowledge worker spends about a quarter of his or her day looking for information... that already exists, somewhere else?

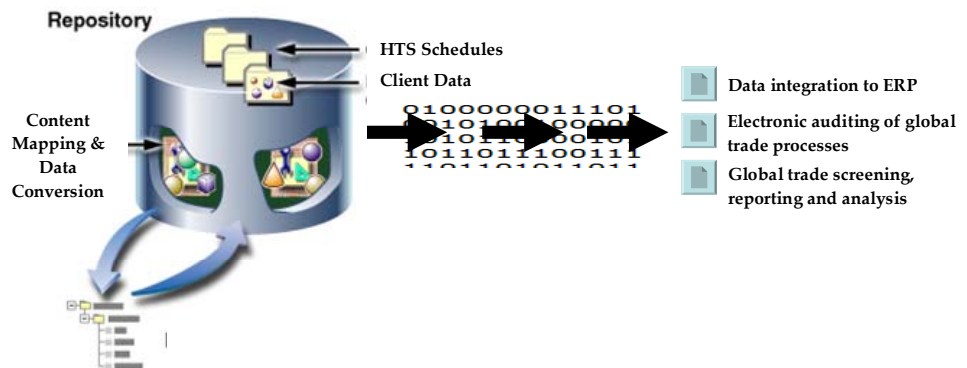

Global trade information is stuck in paper, manuals, books, guides, and web-sites. As a result, global trade professionals have the hardest time getting it into a useful data format that can be easily integrated with their company's computer (ERP) systems or global trade systems. Shockingly, many Fortune 500 Companies with 100,000+ international items are still maintaining separate systems for their international trade data, usually in spreadsheets.

Do you know that a recent McKinsey study shows global trade is expected to grow from \$9 Trillion today to \$70 Trillion by 2025...? With rising trade volume, trading in more countries each year, and ever increasing demands from governments, how will it be possible to collect and maintain all the trade information required to meet your growing legal and operational needs?

The data experts at Global Data Mining and our sister company CUSTOMS Info have created the solution for you... our eTradeData™ Library.

- 1. IDENTIFY GLOBAL SOURCES**
- 2. CAPTURE ORIGINAL FORMAT**
- 3. MAP THE CONTENT**
- 4. CONVERT TO DATABASE**
- 5. STORE IN DATA WAREHOUSE**
- 6. BRING TO LIFE IN YOUR SYSTEMS**
